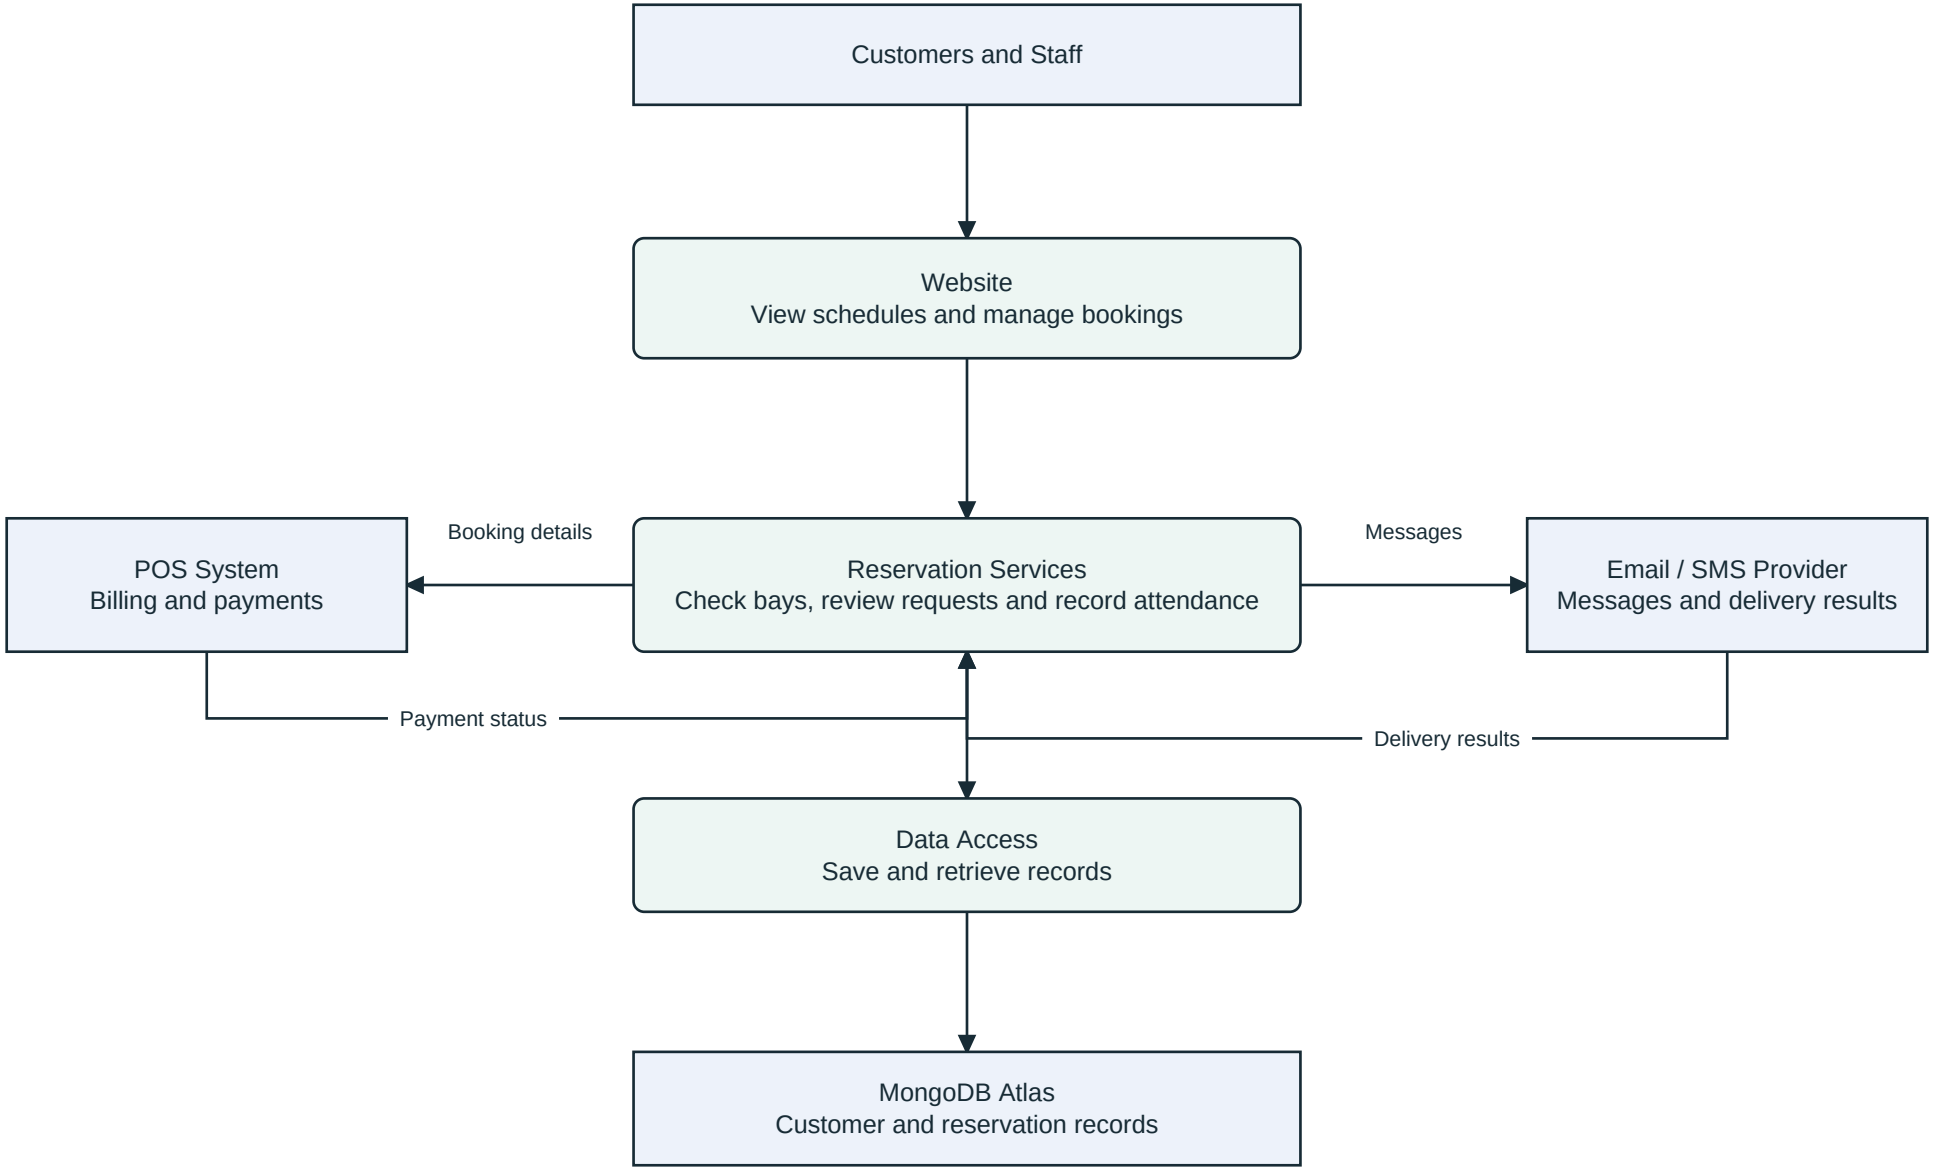
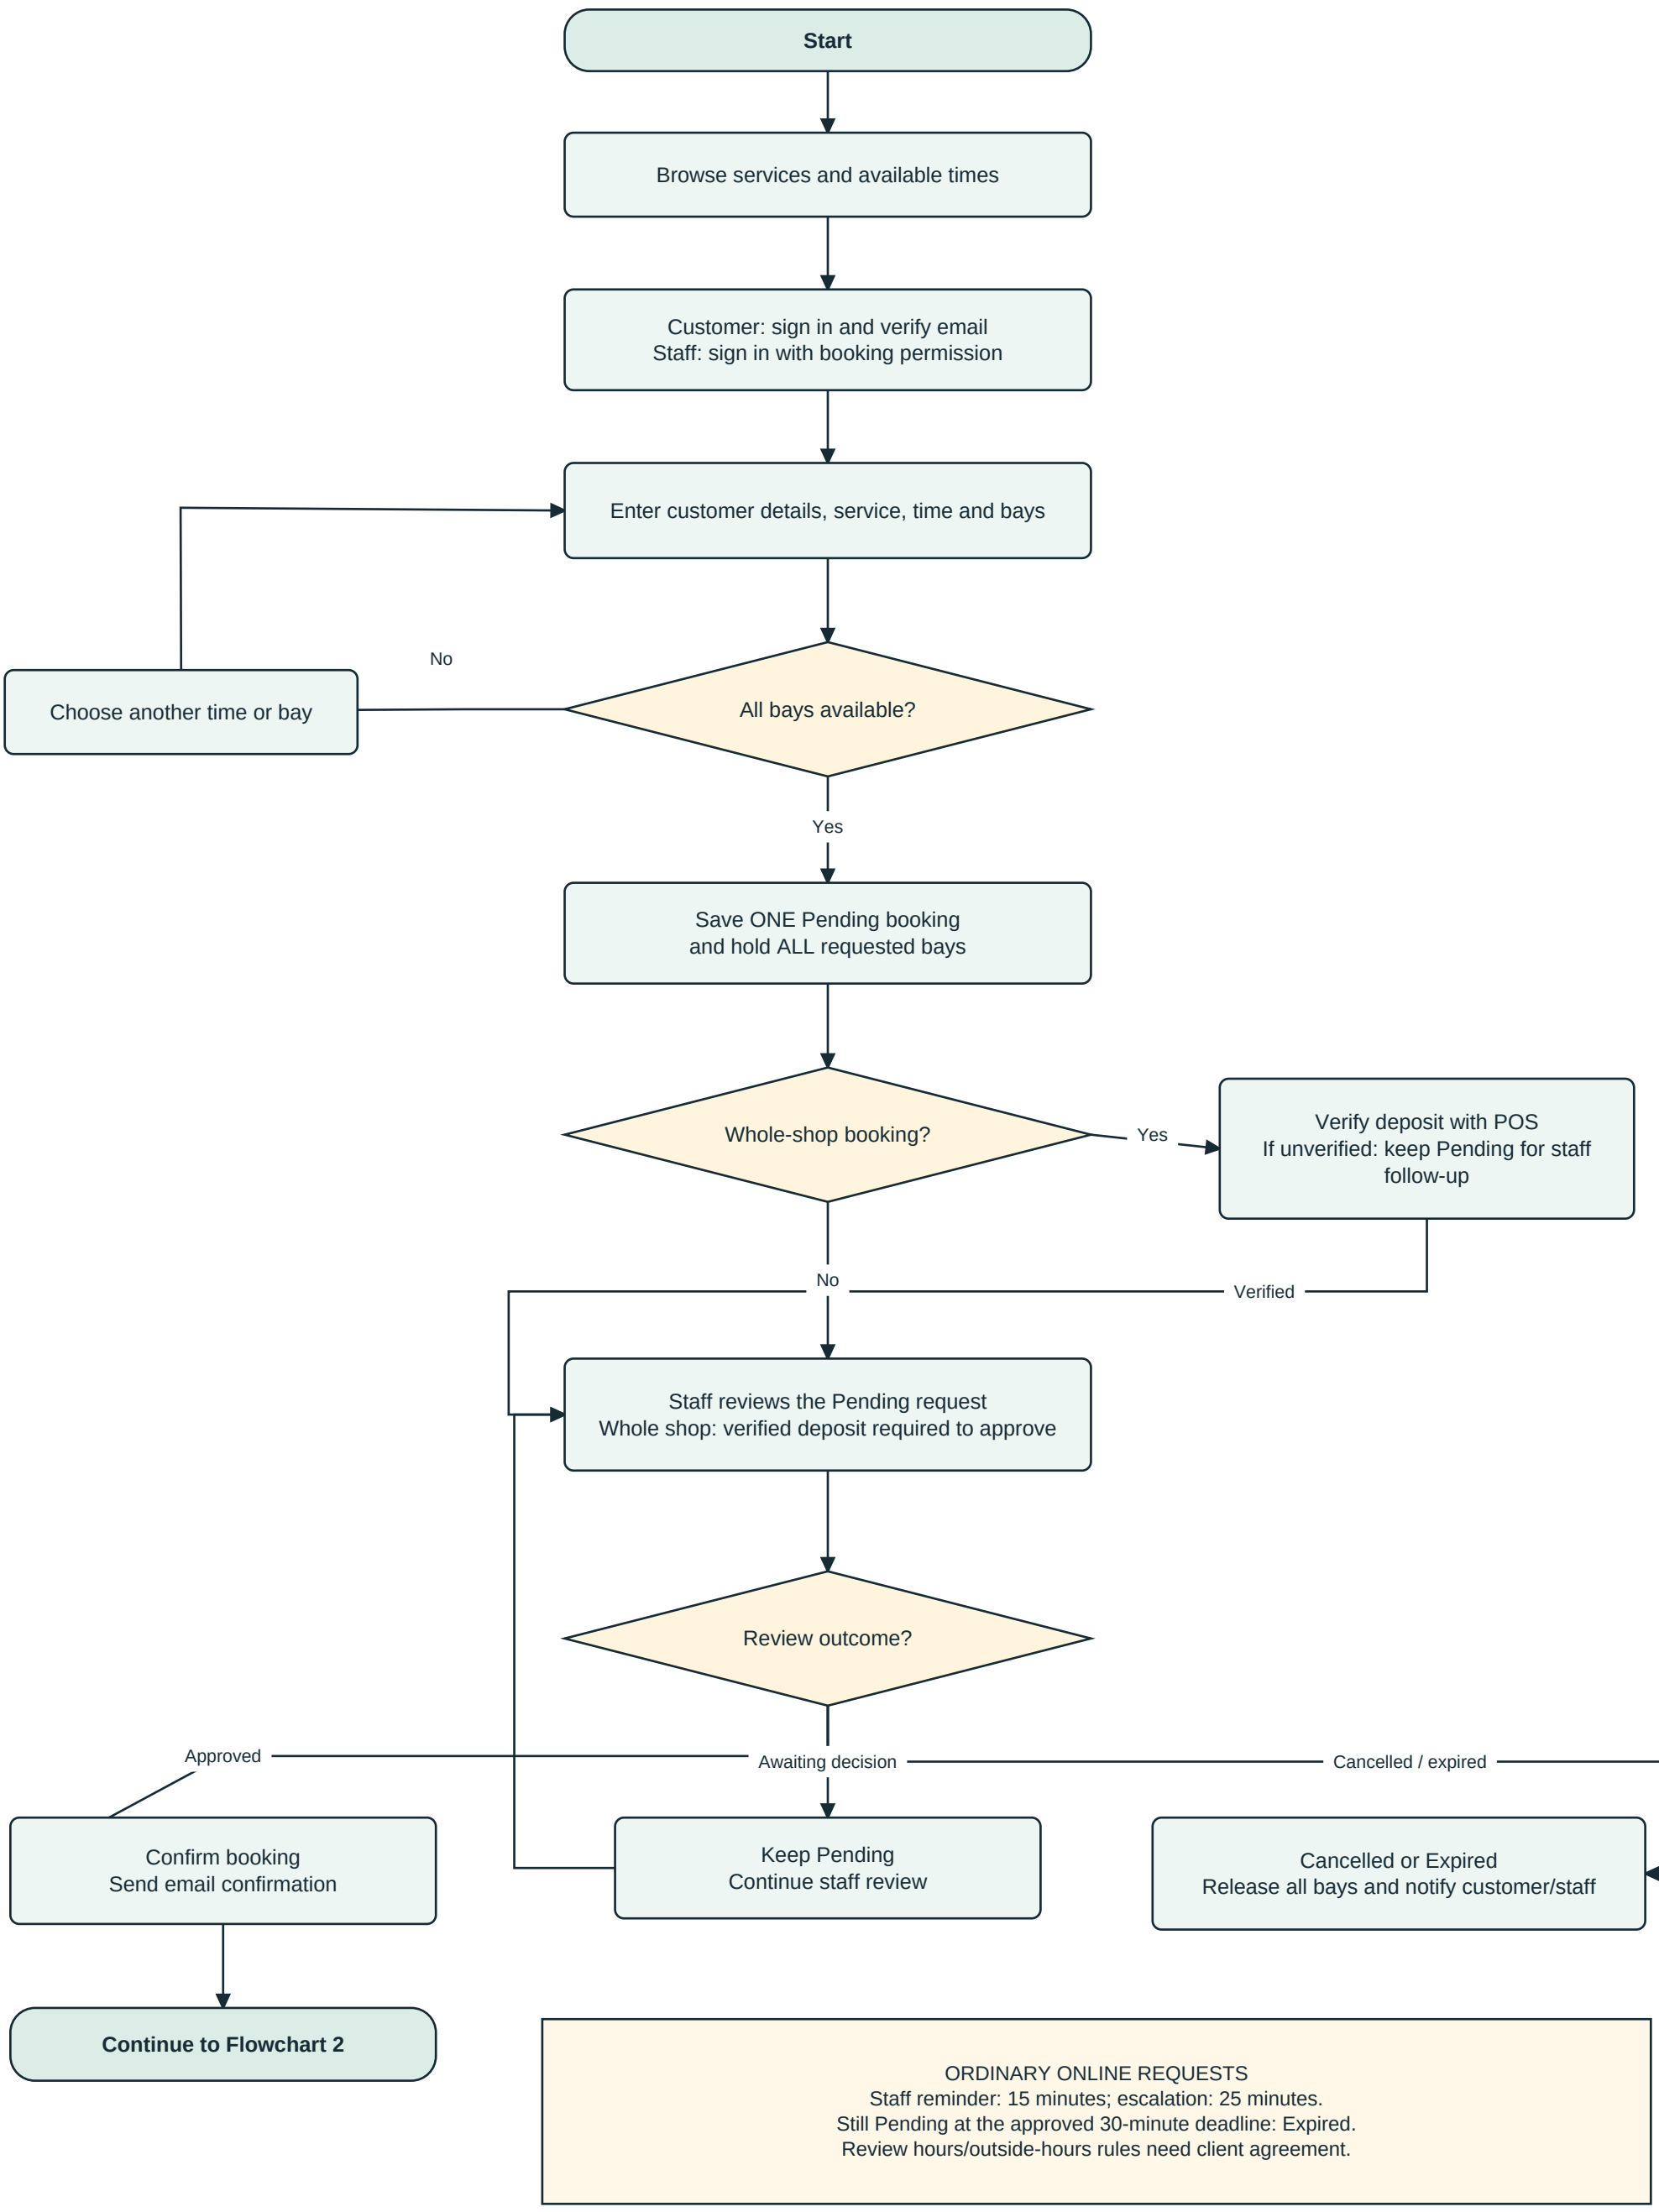
How the System Works

Read from top to bottom. POS handles payments; staff make reservation decisions.



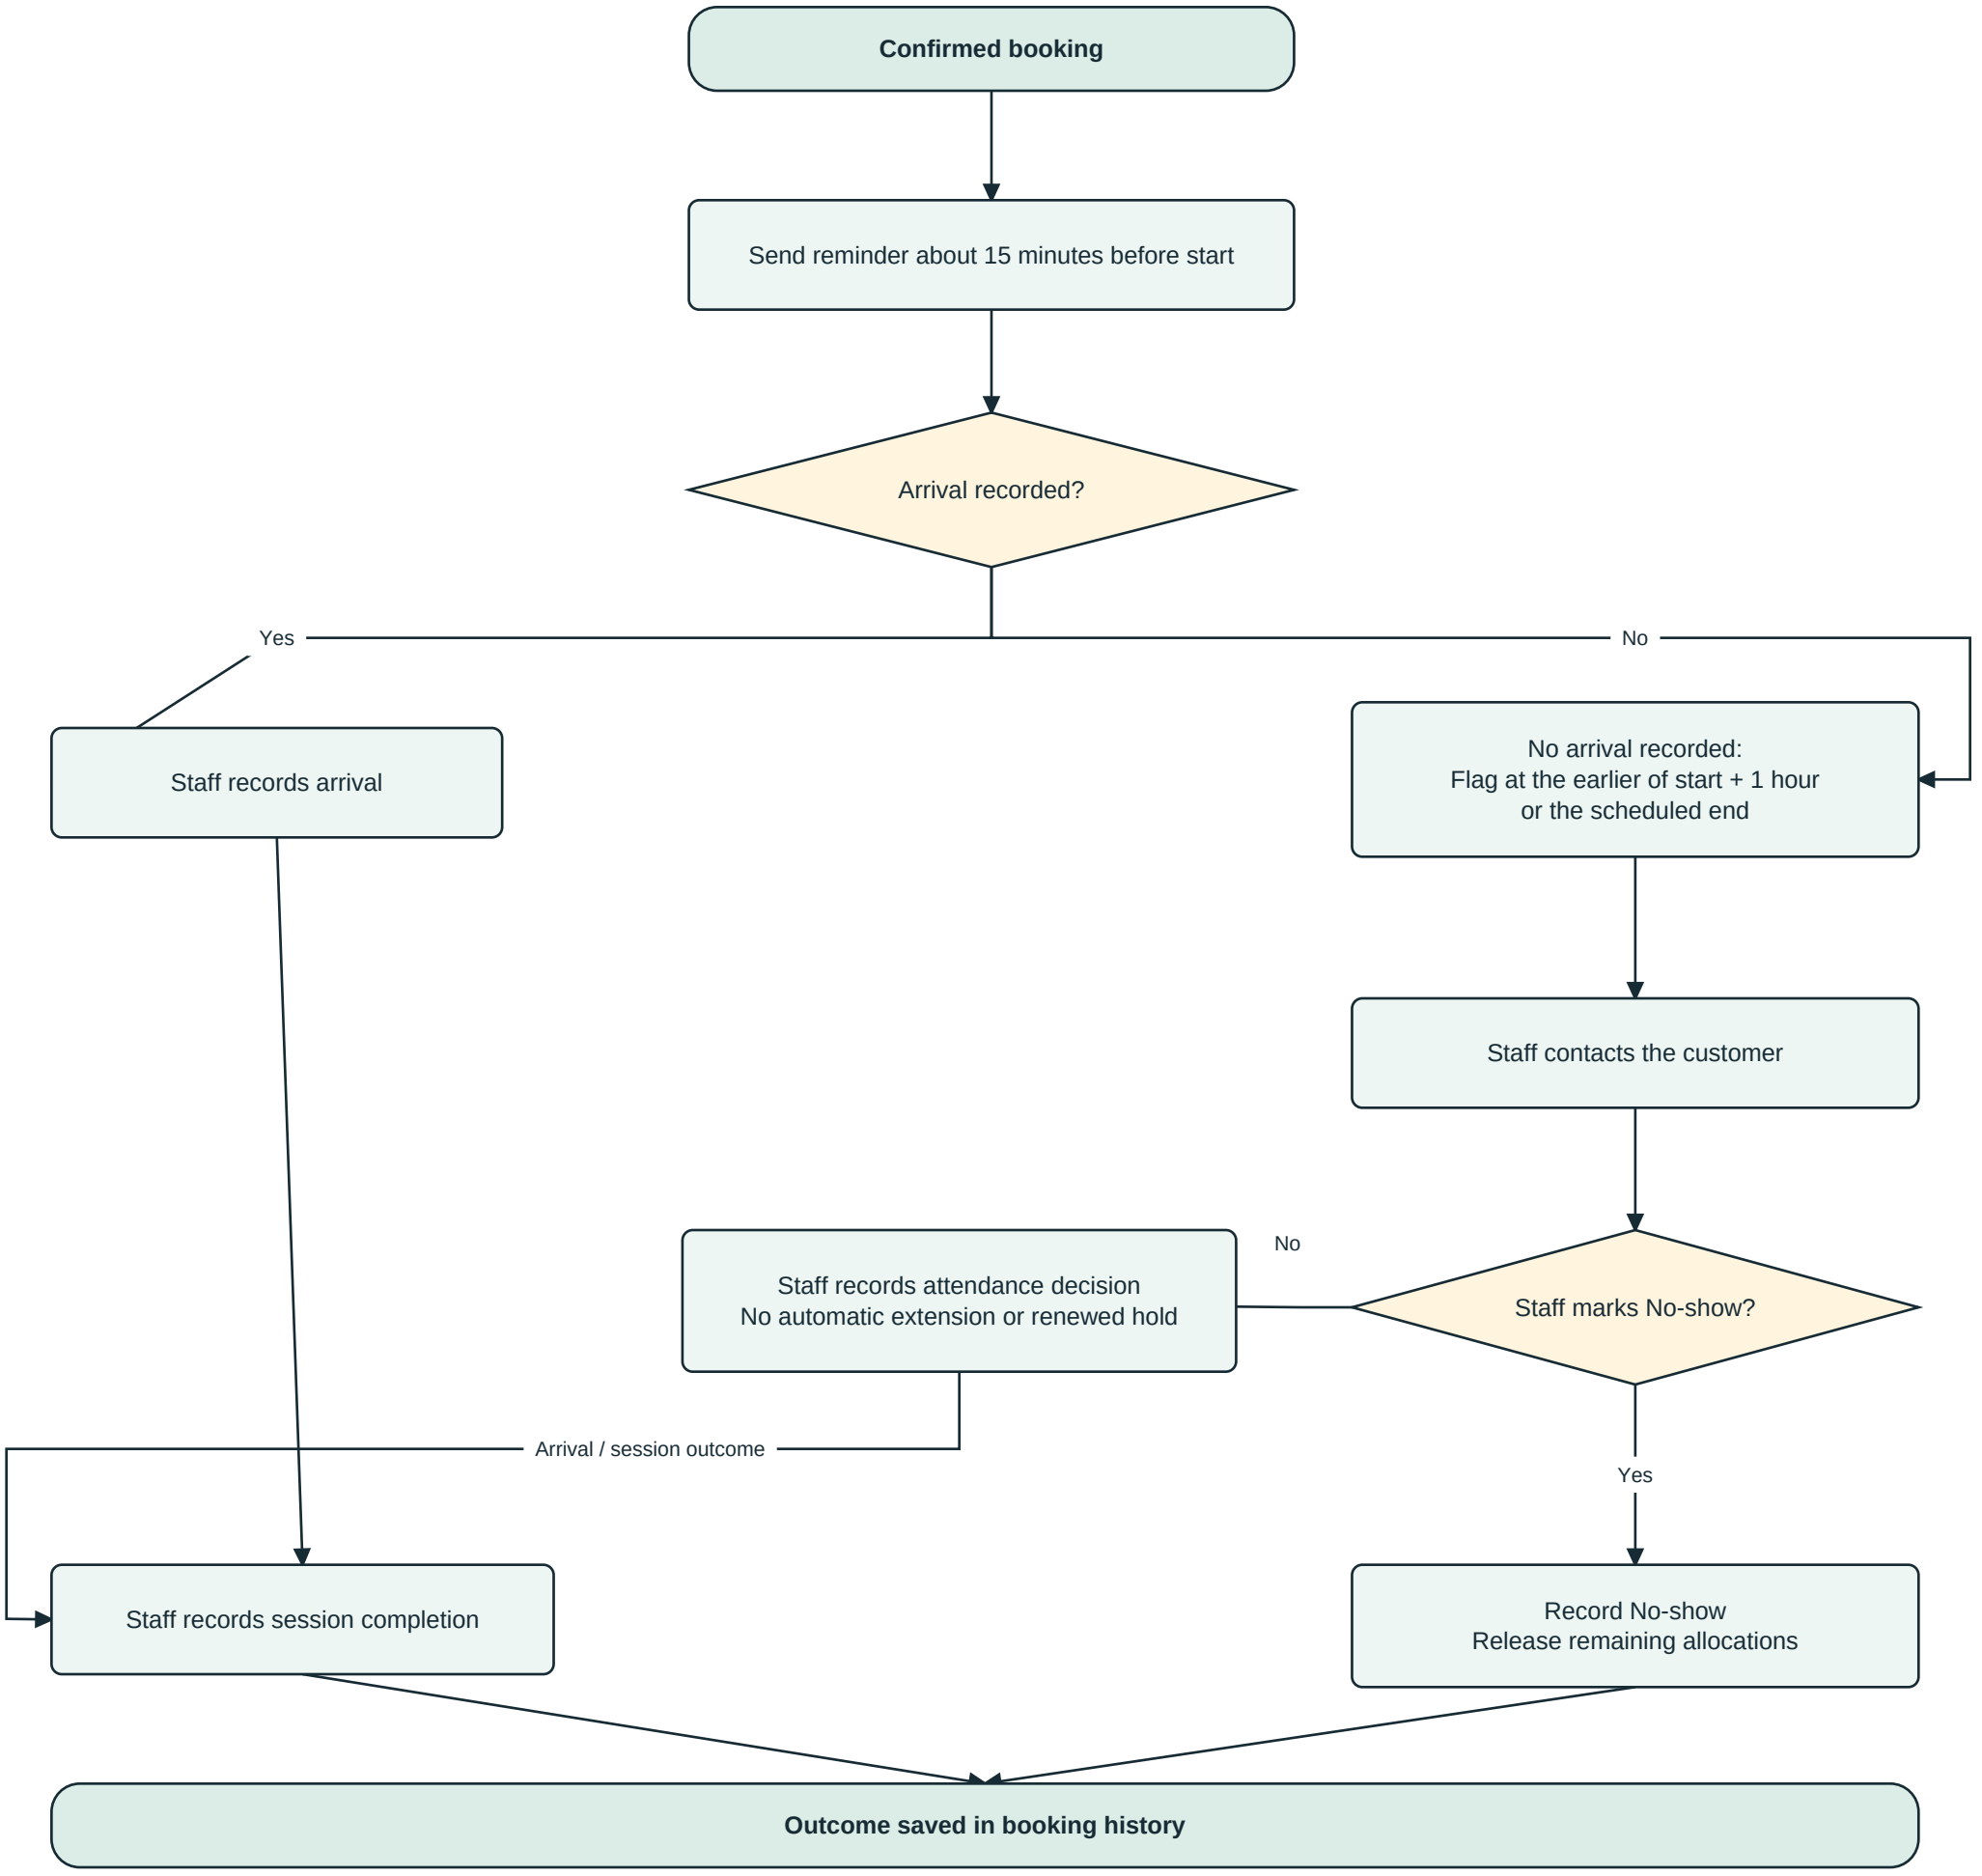
System Flowchart 1 | Booking and Approval

Start here. After confirmation, continue to Flowchart 2. Use Flowchart 3 for changes.



System Flowchart 2 | Arrival and No-show

Attendance is entered by staff. The system does not sense whether a bay is occupied.



System Flowchart 3 | Change a Booking

Customers request changes; authorized staff approve them.

DFD Reading Map | Six Areas of the System

Overview only. Open the numbered Level 2 pages to see the actual data flows.

1.0 Accounts and Access
Sign up, verify email and sign in

2.0 Reservations
Check bays, save bookings and manage changes

3.0 Notifications
Send confirmations, reminders and staff alerts

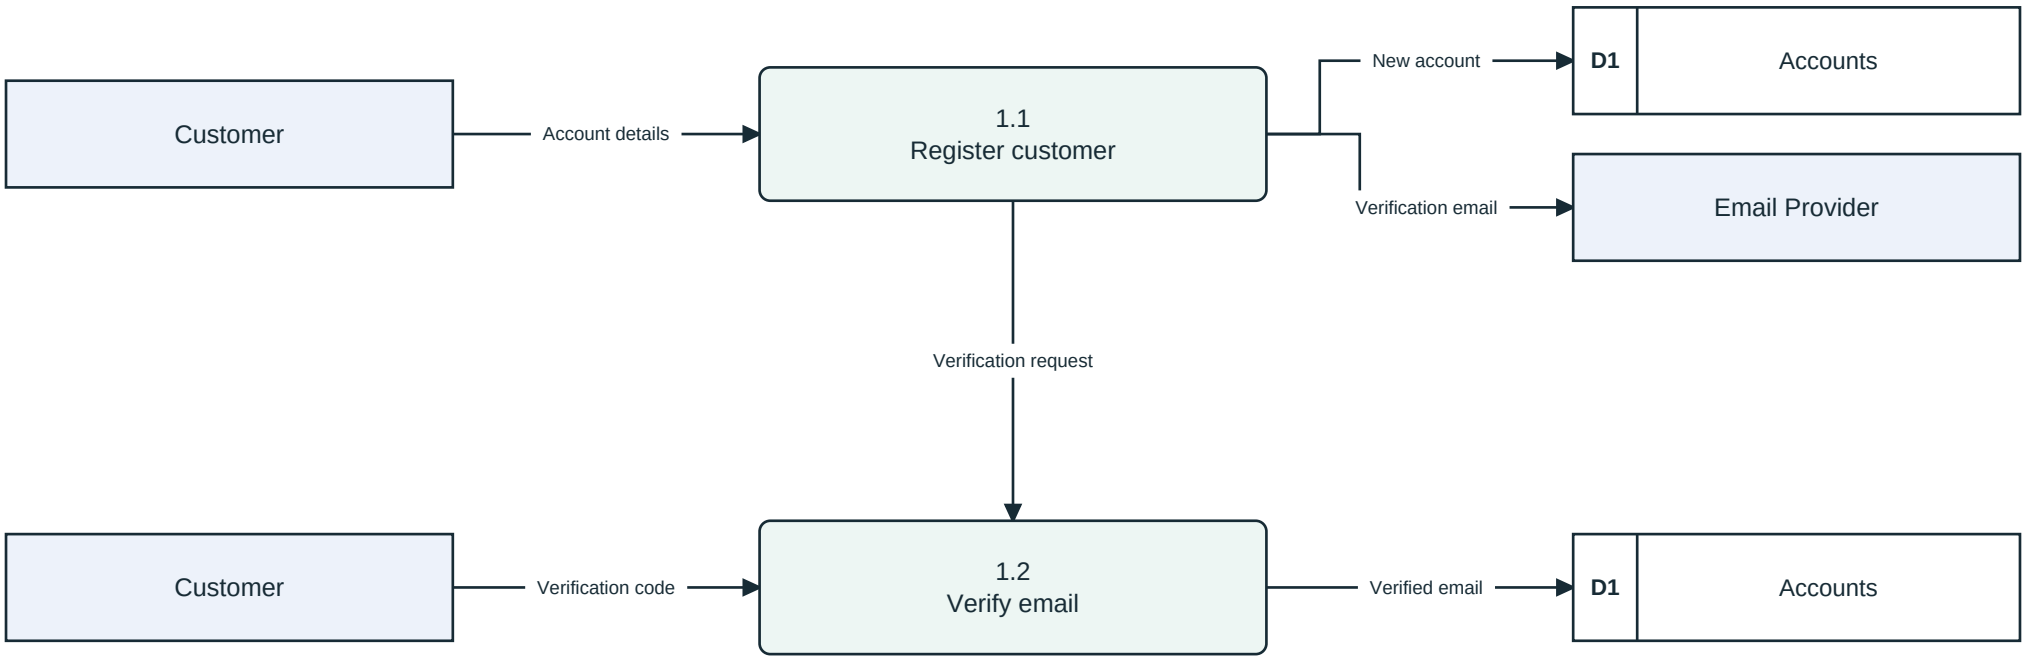
4.0 Reports
Search records and show booking reports

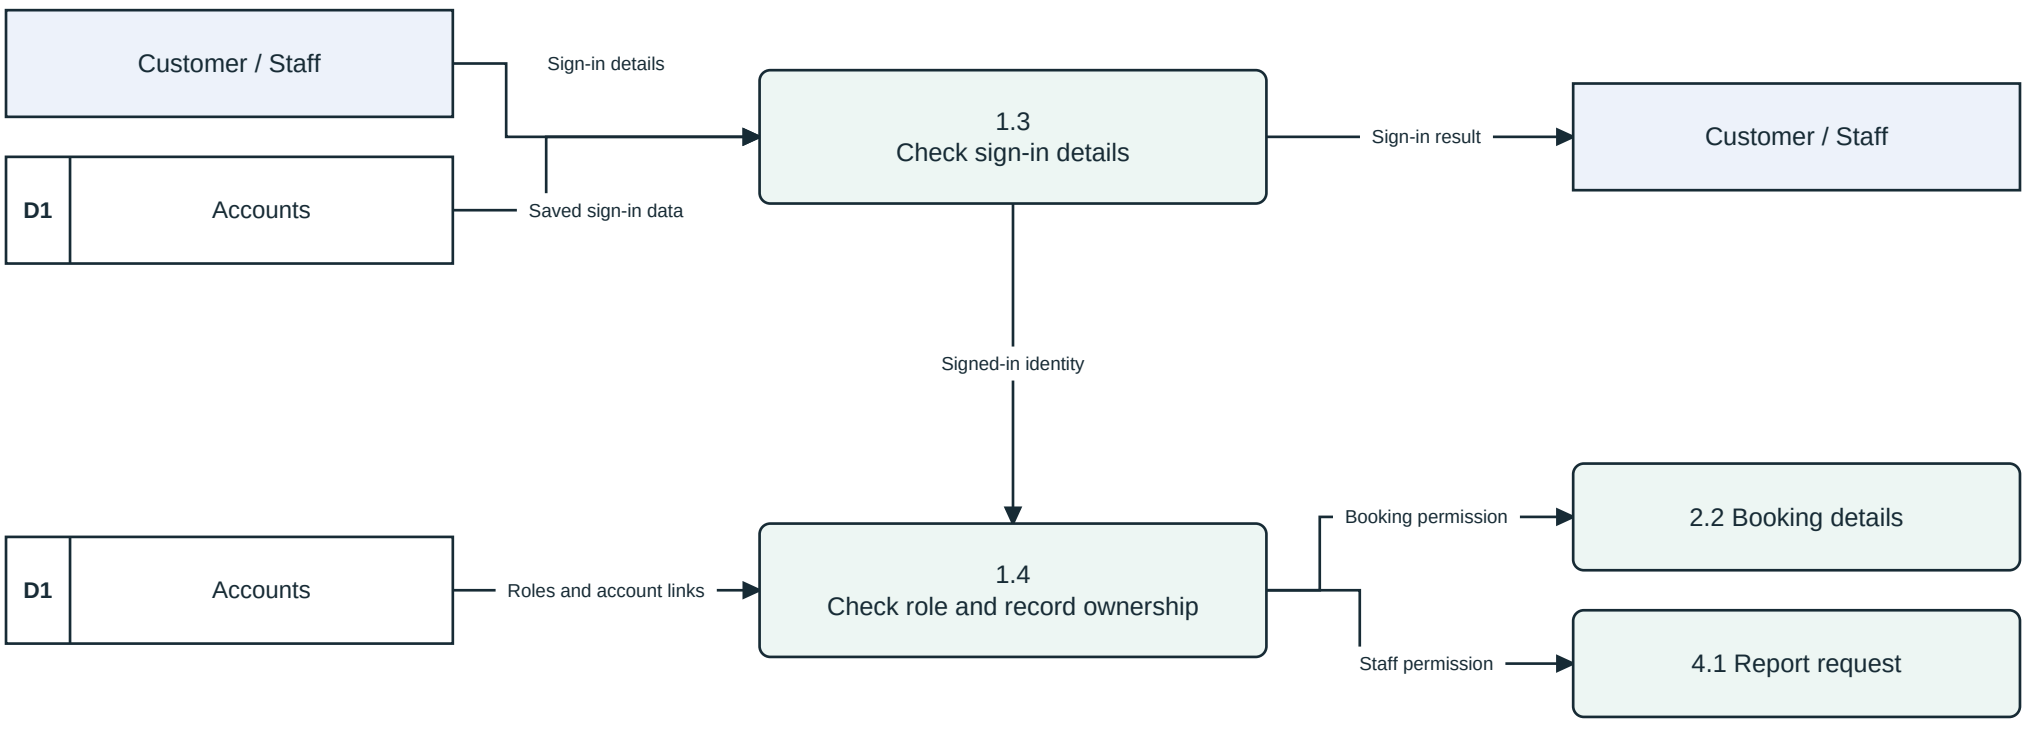
5.0 POS and Deposits
Exchange POS status and verify deposits

6.0 Basic Inquiries
Answer common questions from approved FAQs

Level 2 DFD | 1.0 Accounts and Access

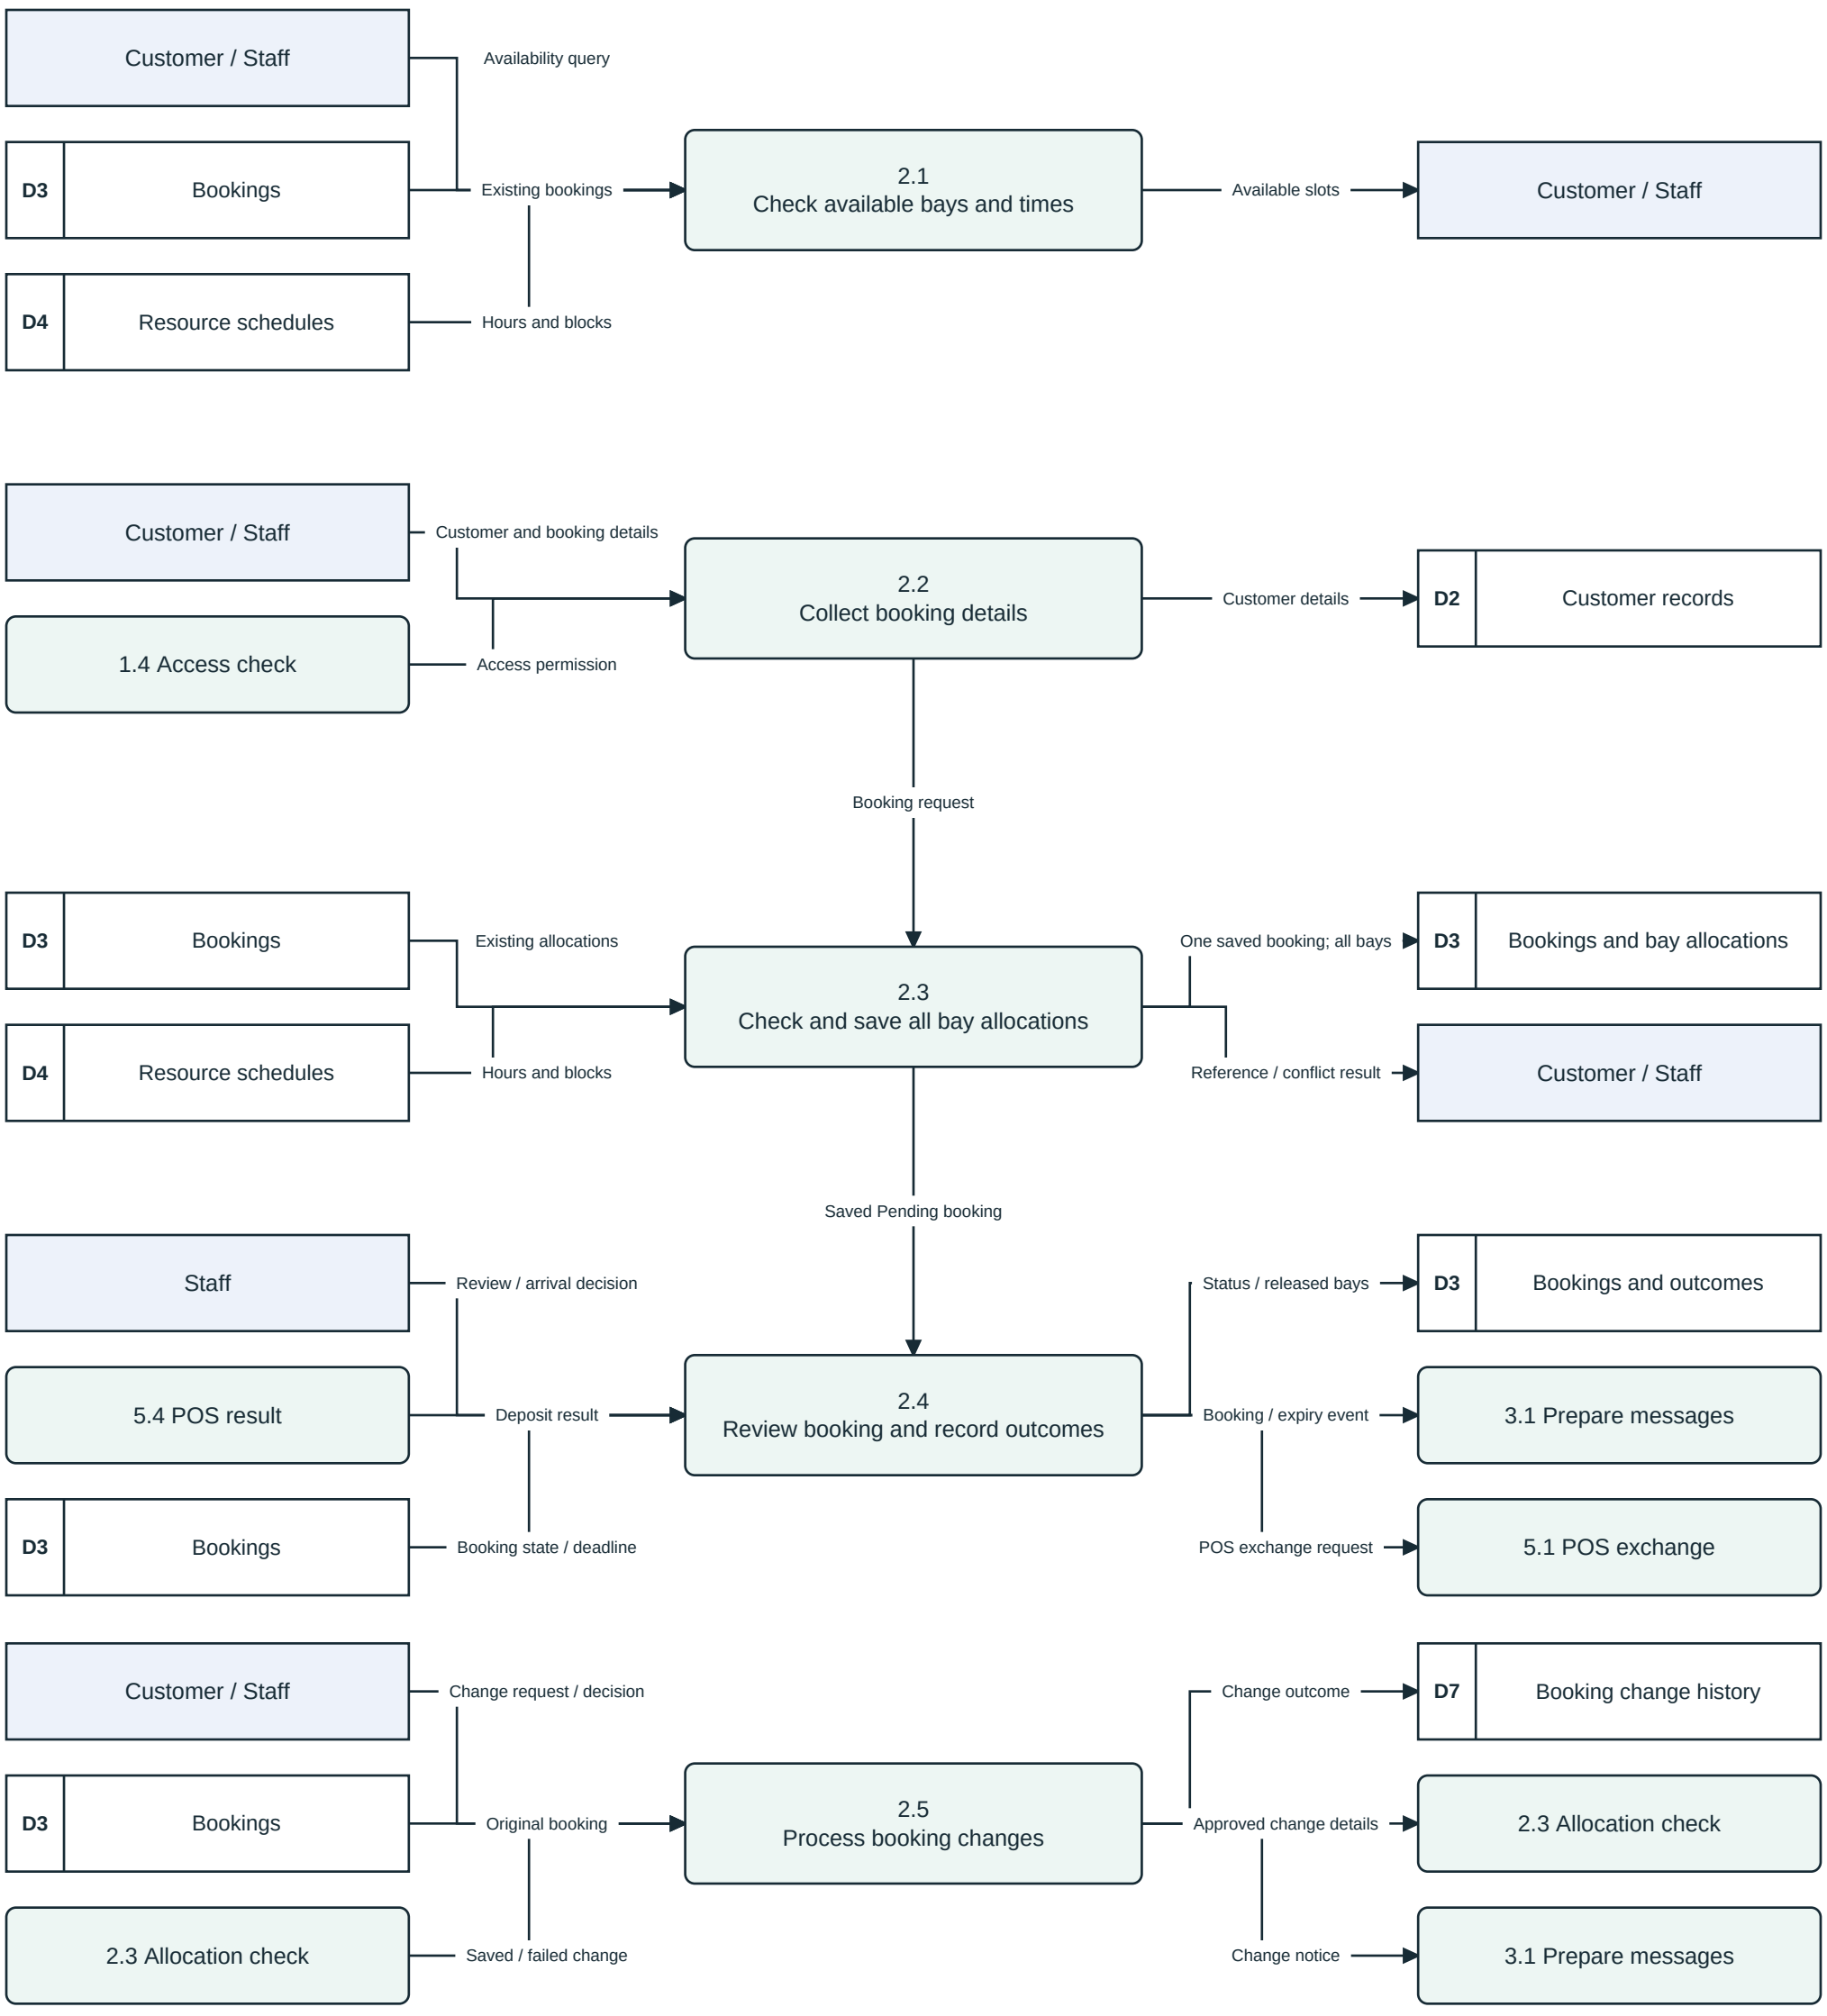
Read the arrow labels as information being passed. Repeated store IDs mean the same records.





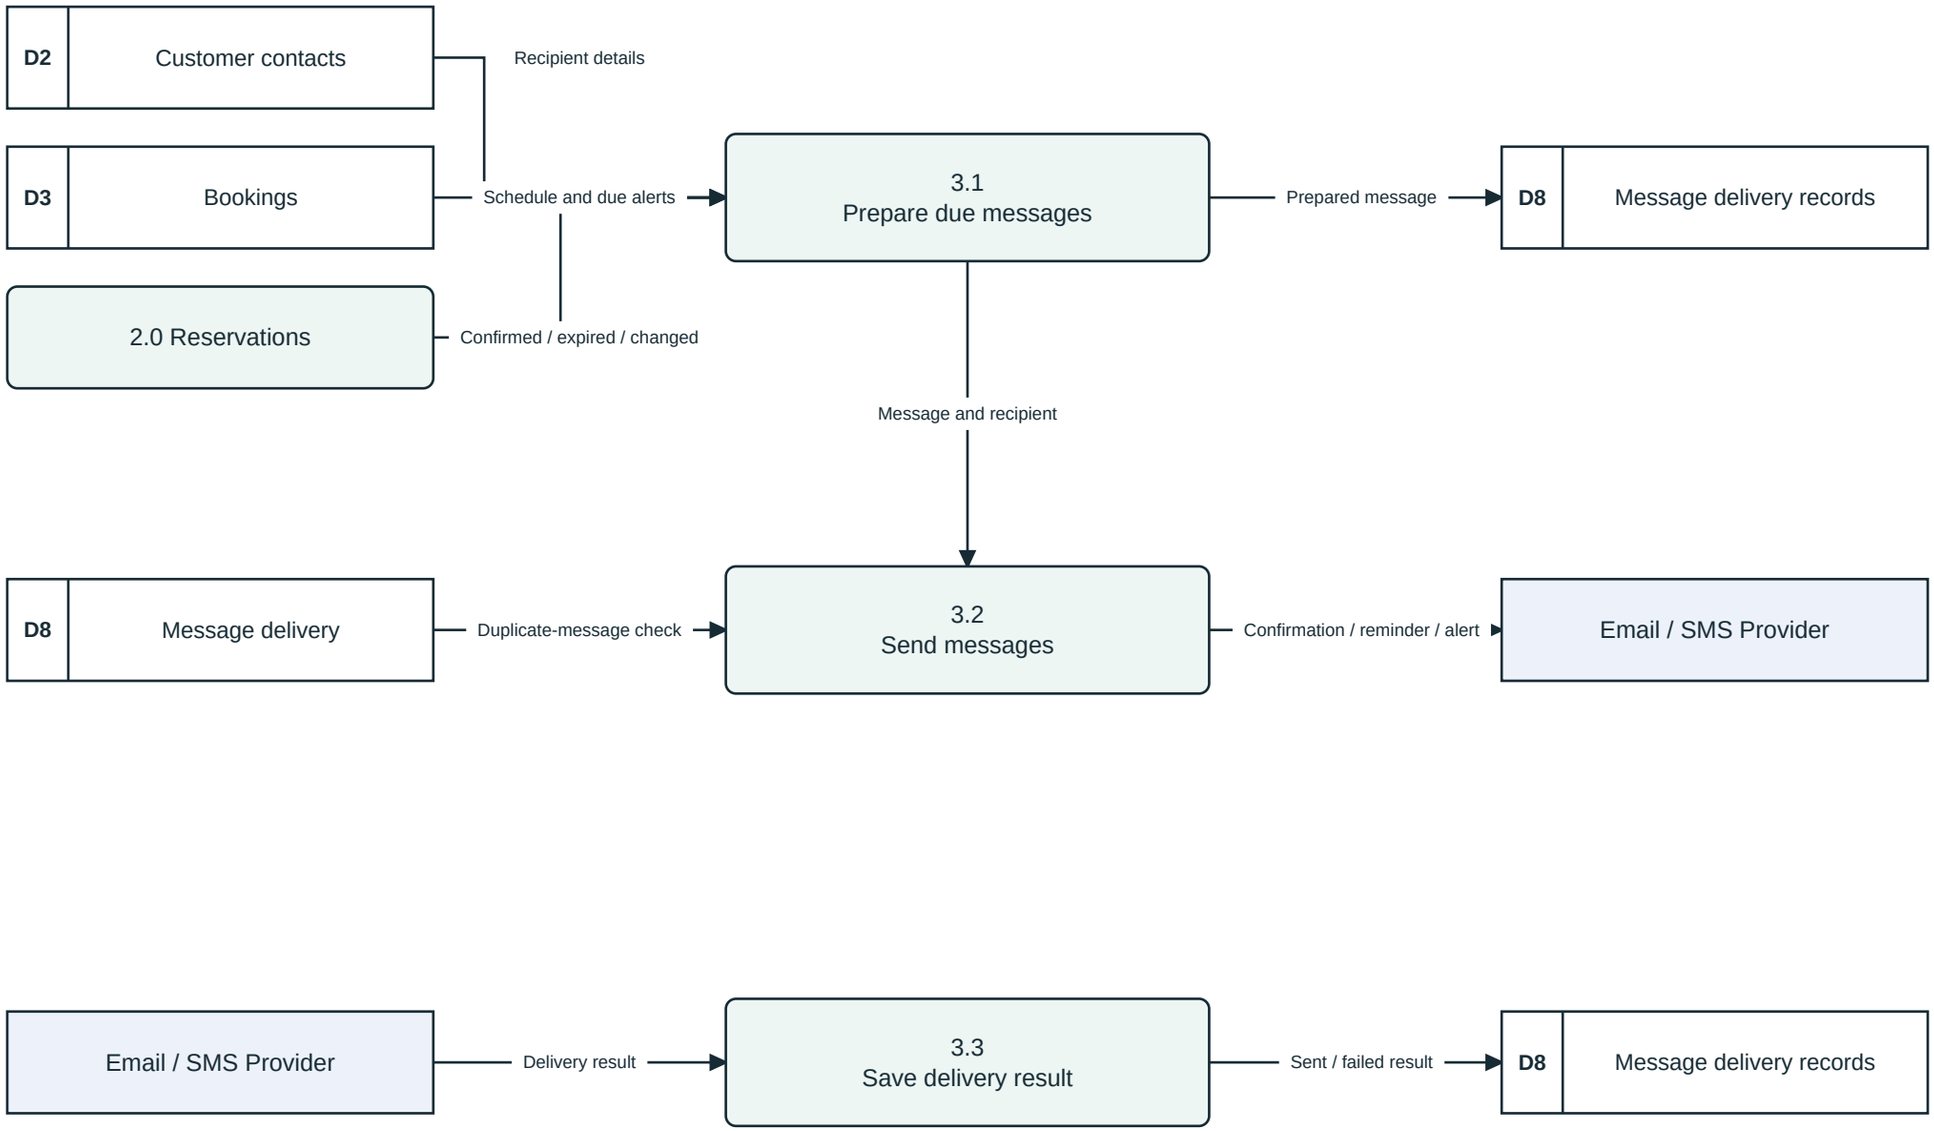
Level 2 DFD | 2.0 Reservations

Read the arrow labels as information being passed. Repeated store IDs mean the same records.



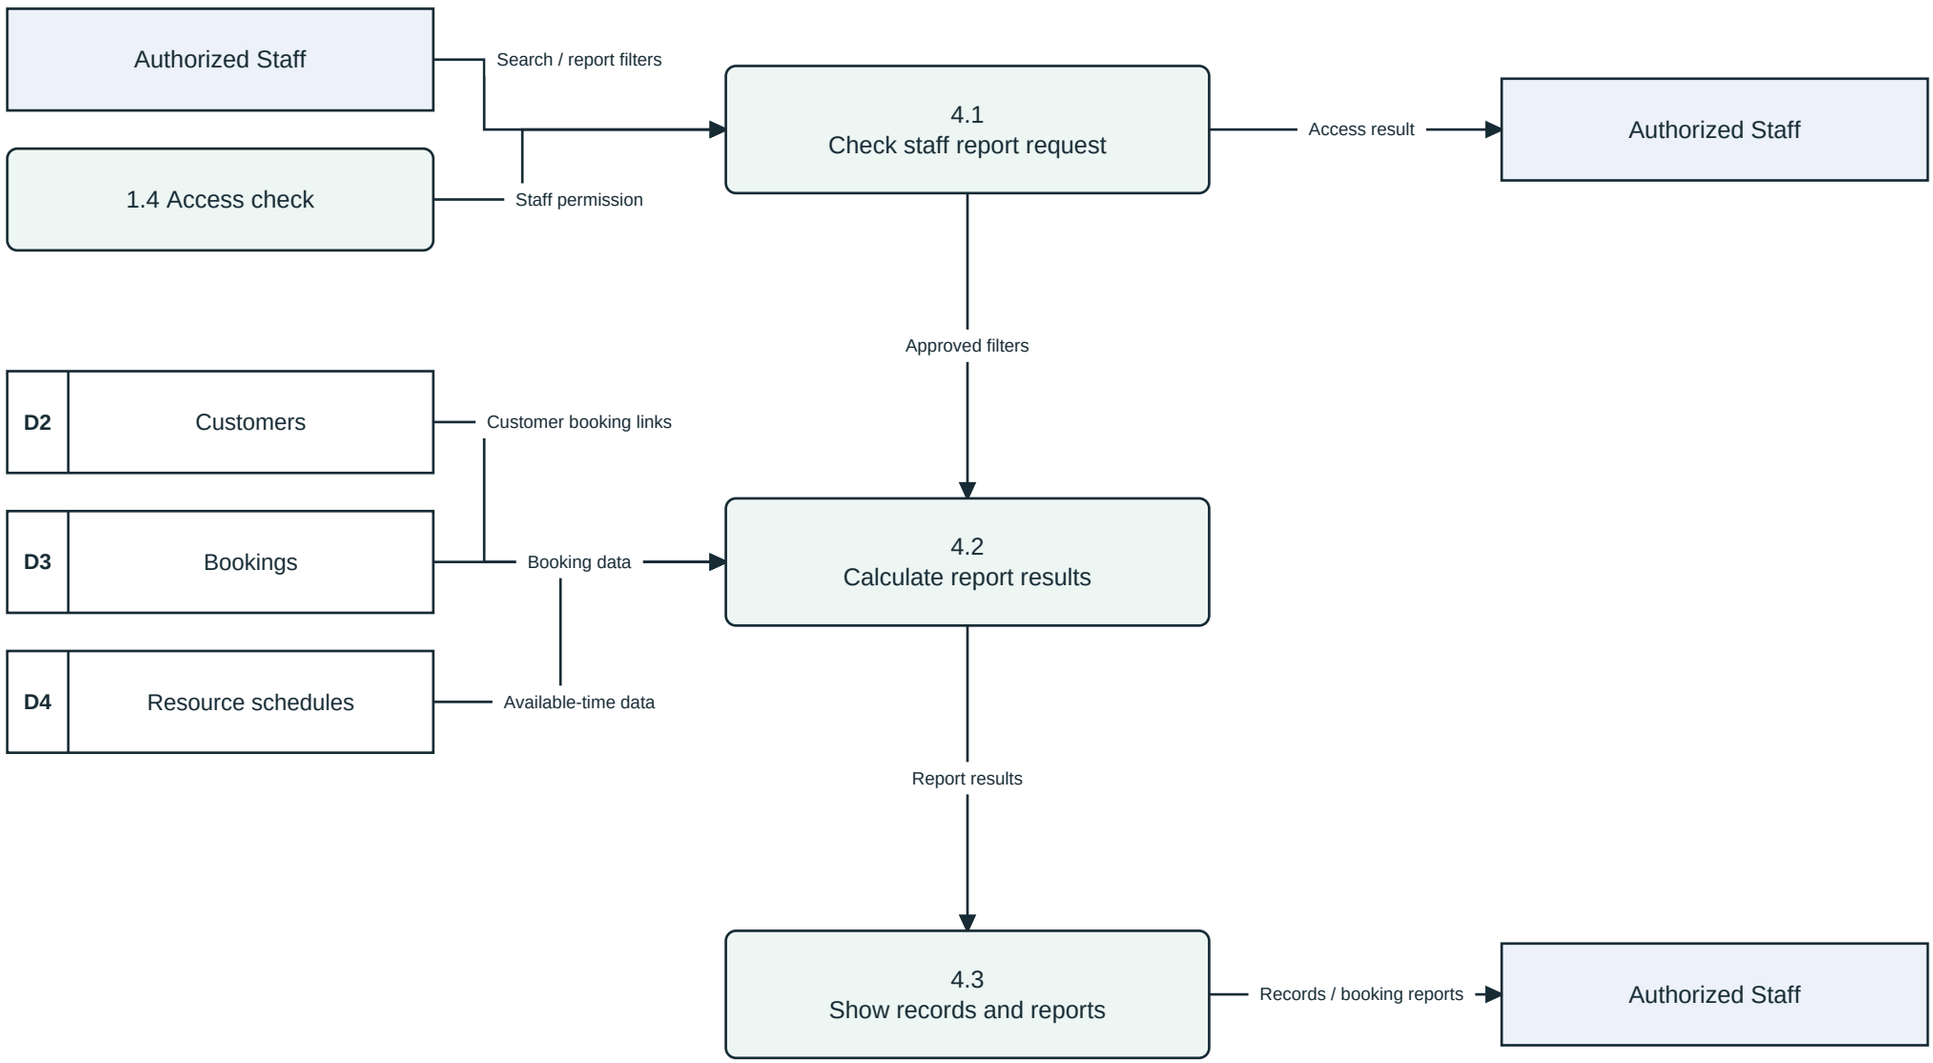
Level 2 DFD | 3.0 Notifications

Read the arrow labels as information being passed. Repeated store IDs mean the same records.



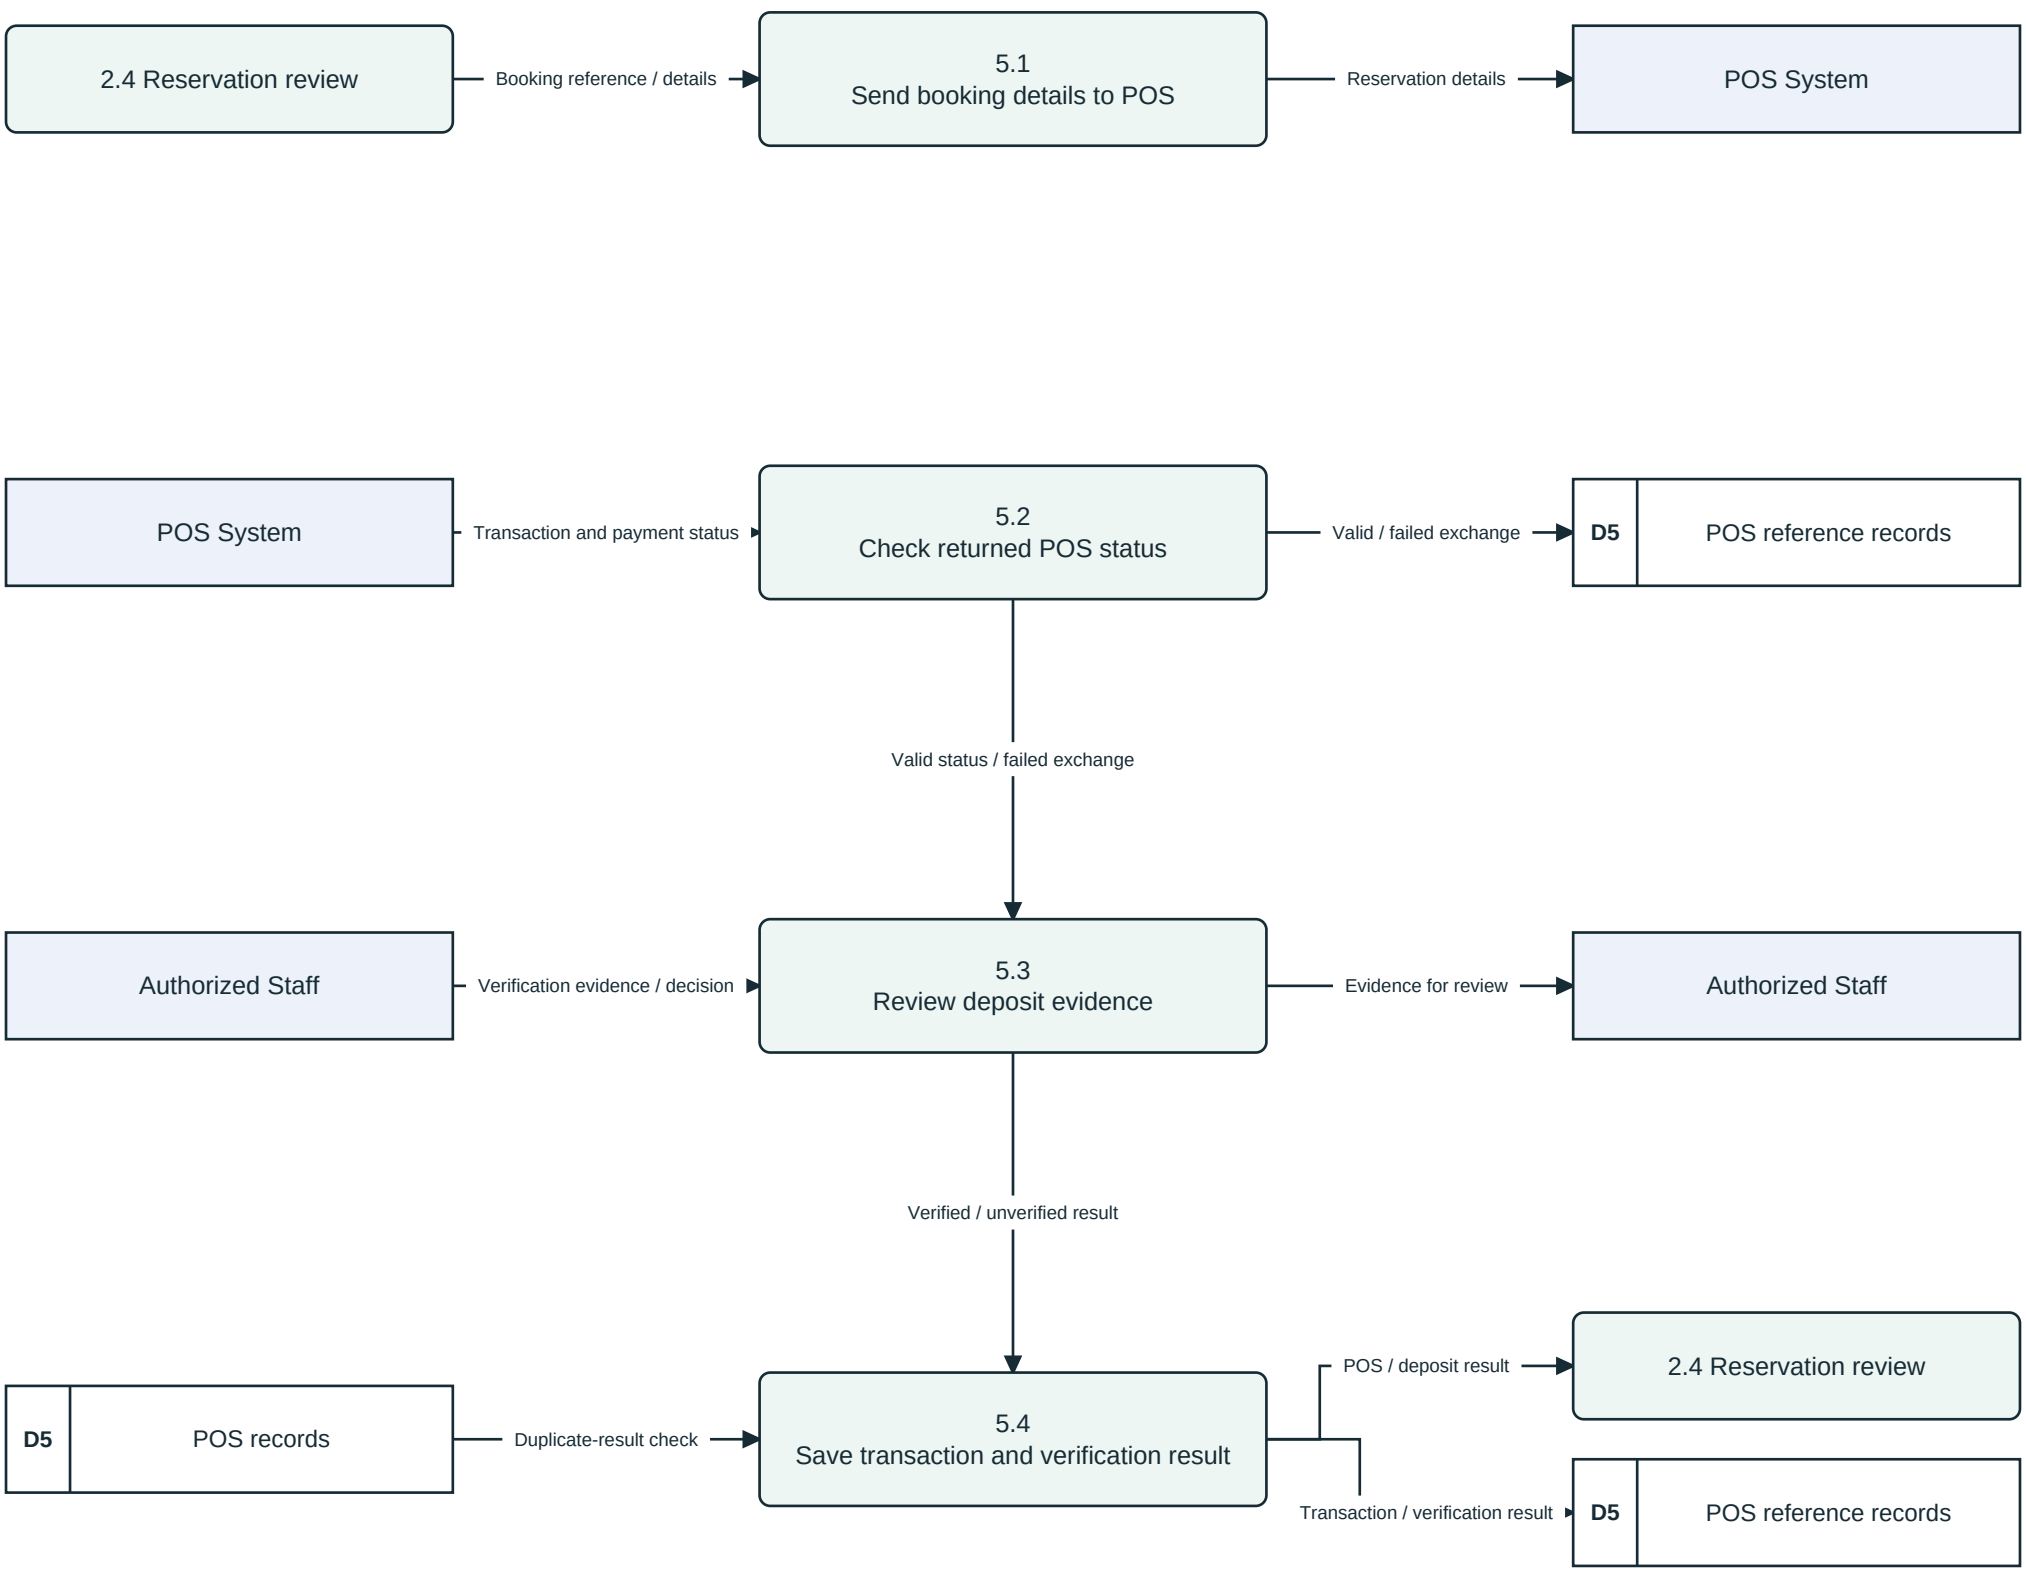
Level 2 DFD | 4.0 Reports

Read the arrow labels as information being passed. Repeated store IDs mean the same records.



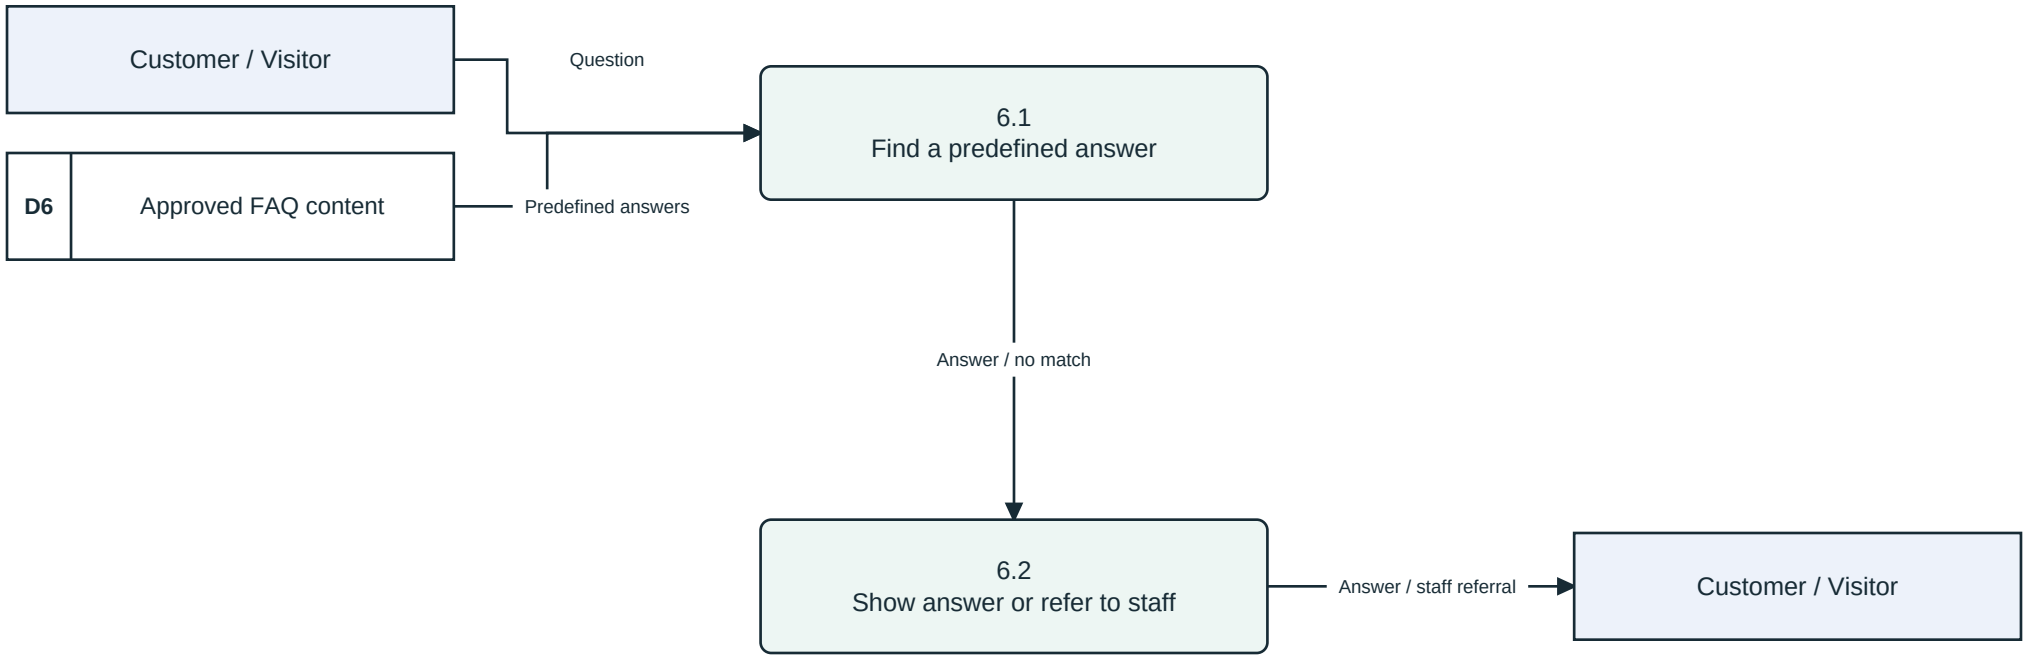
Level 2 DFD | 5.0 POS and Whole-Shop Deposits

Read the arrow labels as information being passed. Repeated store IDs mean the same records.



Level 2 DFD | 6.0 Basic Inquiries

Read the arrow labels as information being passed. Repeated store IDs mean the same records.



Integration Flow | Booking and POS

Reservation manages bookings. POS handles money. A deposit result does not confirm a booking by itself.
